Samples

- Generated by Damir
- Sample 5204
 - MC@NLO ttbar→6jets, full simulation, Athena 11.0.42
- AOD produced using Athena 12.0.5
 - 1050 events, $E_T > 7$ GeV filter on jets
 - ParticleJetContainer
 - each produced with its own H1 weights
 - Cone4TowerParticleJets Cone4TopoParticleJets
 - ConeTowerParticleJets ConeTopoParticleJets
 - Kt4TowerParticleJets Kt4TopoParticleJets
 - Kt6TowerParticleJets Kt6TopoParticleJets
 - JetCollection using OJF
 - no proper H1 weights available: use Cone weights
 - number of jets fixed to 6
 - R parameter set to 0.7
 - FuzzyTowerJets FuzzyClusterJets

Jet-parton matching

- Study events with “true” jet hypothesis

- Matching criteria

- For each parton, look for a matching jet

- restrict search in a region limited by $\Delta R_{\max} = 0.2$
- keep the closest jet in this region

- Demand that a jet be matched only once

- matching efficiencies depends on interparton distances
 - same top combinations

$$\langle \Delta R(u-b) \rangle = 2.220 \pm 0.002$$

$$\langle \Delta R(\text{ubar-bbar}) \rangle = 2.219 \pm 0.002$$

$$\Rightarrow \langle \Delta R(u-dbar) \rangle = 2.008 \pm 0.002$$

$$\langle \Delta R(\text{ubar-d}) \rangle = 2.010 \pm 0.002 \leftarrow \Rightarrow$$

$$\Rightarrow \langle \Delta R(dbar-b) \rangle = 2.037 \pm 0.002$$

$$\langle \Delta R(d-bbar) \rangle = 2.036 \pm 0.002 \leftarrow \Rightarrow$$

- other 9 combinations

$$\langle \Delta R \rangle \approx 2.40$$

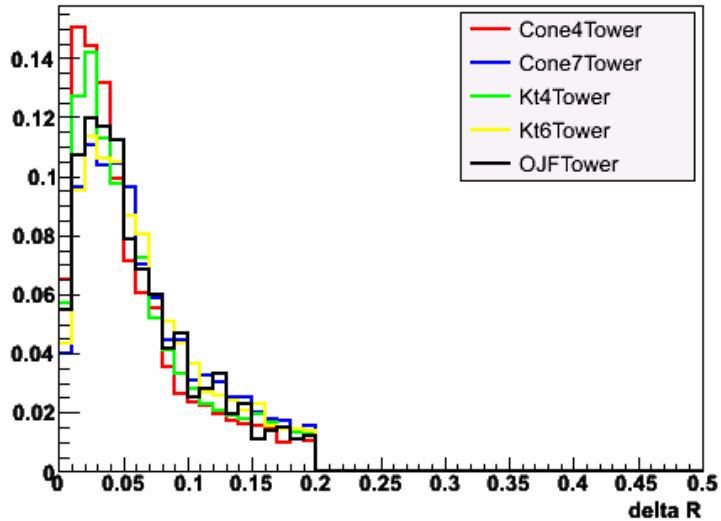

Parton matching efficiencies

■ no p_T jet cuts applied

E(GeV) of 6th highest pT jet

Comments

- Very encouraging results for OFJ
 - here fixed number of jet mode!
 - should try with number of jets not fixed
 - adjust ω parameter
 - more events would allow mass plots
 - requires 6 matched partons 1 to 1
